**Re:** Recommendation for Diamon-Fusion Windshield Protective Coating

To whom it may concern,

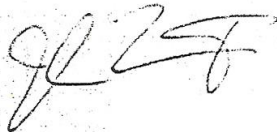

I am a professional wildlife and nature photographer and drive long distances in a variety of driving conditions in the course of my profession. I often have to replace a new windshield within months of getting it installed, due to rock chips and cracks.

In October 2008 I purchased a new 2009 Subaru Forester and purchased the Diamon-Fusion protection package for my windshield. The results have been far beyond my expectations. While a normal windshield often lasted less than a month before developing chips and cracks, my Diamon-Fusion protected windshields have been lasting me a year before needing to be replaced.

To say that I have been pleased with what Diamon-Fusion has done for me would be to understate the fact. The product has been unbelievable and I would highly recommend it to anyone that wants peace of mind with their windshields and does not want to have to worry about every little chip and crack. Further, Diamon-Fusion and King's Glass in Calgary, Alberta have done their best to accommodate my schedule and my demands when I wasn't able to find my contract and had misunderstood some of the fine print in the contract.

I am very grateful at this point that I was talked into purchasing the Diamon-Fusion protection and would highly recommend it to drivers throughout Canada.

Sincerely,

John Marriott
